Batch-11

#### Task Description #1 – Stack Implementation

Task: Use AI to generate a Stack class with push, pop, peek, and is\_empty methods.

Sample Input Code: class Stack:

```
pass
```

Expected Output:

- A functional stack implementation with all required methods and docstrings

PROMPT:

```
#Write a code to generate a stack class with push, pop, peek and isEmpty methods
```

CODE:

```

• lab6.py > ...
1  #Write a code to generate a stack class with push,pop,peek and isEmpty methods
2  class Stack:
3      def __init__(self):
4          self.stack = []
5      def push(self, item):
6          self.stack.append(item)
7      def pop(self):
8          if not self.isEmpty():
9              return self.stack.pop()
10         else:
11             raise IndexError("Stack is empty")
12     def peek(self):
13         if not self.isEmpty():
14             return self.stack[-1]
15         else:
16             raise IndexError("Stack is empty")
17     def isEmpty(self):
18         return len(self.stack) == 0
19 # Example usage
20 if __name__ == "__main__":
21     stack = Stack()
22     stack.push(1)
23     stack.push(2)
24     stack.push(3)
25     print(stack.peek()) # Output: 3
26     print(stack.pop()) # Output: 3
